

# Custom Electroforming Plant

We manufacture tanks in plastic and metal, this is dictated by the chemistry, size of the tank, or customers preference. We include all ancillary equipment such as heating, agitation, filtration, and rectifiers. Equipment can be small and simple, up to very large and fully automated, all equipment is bespoke to suit the customers' requirements.

This plant was a compact Copper electroforming unit, it including the Copper tank and a rinse tank. Due to limited space we designed the unit to have the filter pump in a bund tray on the floor with the agitation motor and rectifier mounted above. We included all equipment such as heating, thermostats, pipework and fume extraction.

These are small custom bench top units which included a rectifier, filter pump and all necessary ancillaries to electroform.
