

EFFLUENT treatment systems

We can design and produce effluent systems to handle many toxic waste products from processing lines.

The elimination of the materials is vital to the managing of process lines where they contain:

Hexavalent Chromium

Trivalent Chromium

Metals such as Nickel, Cadmium, Zinc, Copper, Iron and many others.

Acid / alkali levels outside the permitted values allowed by Water Authorities.

Control systems

We manufacture control systems from basic pH monitoring control to fully automated facilities with dosing systems, settlement tanks and filter presses for precipitated waste.
